

✂ Product Overview · For Marketing & Sales Teams

The Battle Arena for **Builders of Tomorrow**

ArenaX is a competitive learning platform where people sharpen their coding and AI skills by going head-to-head with others — in real time. Think of it as a gym and a tournament combined: you learn, you practice, and then you compete to prove your rank. No prior experience required to start; ArenaX meets you wherever you are.

THE BIG PICTURE

How ArenaX Works

Four simple pillars power the entire experience — each one connects to the next.

Learn

Structured courses on coding, AI, and prompt engineering — with videos, exercises, and AI feedback.

Practice

Solo challenges, daily problems, and private rooms to drill skills at your own pace without pressure.

Compete

Live 1-on-1 duels, weekly Forge challenges, and hackathons — all with ranked ELO scoring.

Grow

Climb the rank ladder, earn badges, appear on leaderboards, and unlock rewards through referrals.

TARGET AUDIENCES

Who Is ArenaX For?

ArenaX serves a broad spectrum of people. Here's how different backgrounds fit in — and which features matter most to each.

Software Engineers & CS Students

People already writing code who want to sharpen algorithmic thinking, prep for technical interviews, or just compete for fun.

1v1 Coding Duels

DSA Learning Track

Daily Challenge

Leaderboard

Tournaments

AI / ML Enthusiasts

People fascinated by artificial intelligence — whether they code or not — who want to learn how to use and build AI tools effectively.

AI Prompting Track

Agentic AI Track

AI Prompt Battles

Forge Challenges

Finance & Consulting Professionals

Analysts, consultants, and business people who want to harness AI for their workflow without becoming programmers.

AI Prompting Track

Agentic AI Track

Forge Challenges

Private Rooms

Product Managers & Founders

Non-technical leaders who need to communicate with engineering teams and make informed decisions about AI product capabilities.

AI Prompting Track

Agentic AI Track

Daily Challenge

Forge Challenges

Career Switchers & Freshers

People entering tech from other fields, or recent graduates, who need structured skill-building and portfolio-worthy competition results.

DSA Learning Track

Solo Practice

Daily Challenge

Rank System

College Clubs & Coding Societies

Student organisations running inter-college events, competitive programming clubs, or internal coding leagues.

FEATURE GUIDE

Everything ArenaX Offers

A plain-English breakdown of every feature — what it is, how it works, and who benefits most.

1v1 Live Coding Duels

Known on the platform as "Iaidō Duels" — named after the samurai art of the instant draw

This is the heart of ArenaX. Two users are matched against each other and given the same algorithmic problem. The first person to submit a correct, working solution wins. It's fast, intense, and completely fair — both players see the same question at the same time. Winners gain ELO rating points; losers lose some. Over time, your ELO reflects your true skill level.

HOW IT WORKS

1

Click "Find Match"

ArenaX finds you an opponent of similar skill in seconds. If no one is available, a smart bot fills in.

2

Solve the Problem

A coding problem appears. Write your solution in the built-in code editor. Multiple programming languages supported.

3

Win & Climb

The first correct submission wins. ELO is updated instantly. Your tier and rank update in real time.

EXAMPLE USE CASE

Riya, a final-year CS student, uses ArenaX daily to prep for FAANG interviews. She duels five people every morning before college. After two weeks, she's climbed from Bronze (Ashigaru) to Silver (Samurai) — a verifiable skill signal she adds to her resume.

BEST FOR: SOFTWARE ENGINEERS

CS STUDENTS

INTERVIEW PREP

AI Prompt Battles

Known as "Kotodama Battles" — Kotodama means "word spirit" in Japanese

Instead of writing code, you write instructions (called "prompts") to guide an AI to complete a task. Both competitors get the same challenge, and an AI judge scores whose prompt produced the better result. This is the perfect track for non-programmers who want to master AI tools — because the skill here is clear thinking and communication, not syntax.

HOW IT WORKS

1

Receive the Challenge

Example: "Write a prompt that gets the AI to create a professional email declining a meeting politely."

2

Write Your Prompt

Craft clear instructions for the AI. Your prompt is sent to GPT-4o and the output is captured.

3

AI Judges the Result

An AI grader scores both outputs on a rubric. The higher-scoring prompt wins the duel.

EXAMPLE USE CASE

Arjun, a consultant at a Big 4 firm, has no coding background but uses ChatGPT daily. ArenaX's Prompt Battles sharpen his skill at getting better AI outputs faster — and his improving ELO rank shows his team he's genuinely skilled at AI, not just guessing.

BEST FOR: FINANCE & CONSULTING

PRODUCT MANAGERS

NON-TECHNICAL USERS

Private Rooms (Dojos)

Challenge a specific friend, classmate, or teammate — no public matchmaking

Private Rooms let you create a custom coding or prompting duel and share a unique code with anyone you want to challenge. Great for college societies that want to run internal tournaments, study groups that practice together, or companies that want to run friendly team challenges.

HOW IT WORKS

1

Create a Room

Click "Create Private Room" to get a unique 6-digit code.

2

Share the Code

Send it to your friends via WhatsApp, Slack, or any chat. They join using the code.

3

Compete & Repeat

Multiple rounds can happen in the same room. No public leaderboard impact — just fun.

EXAMPLE USE CASE

The **CodeCell club at NIT Trichy** uses Private Rooms every Friday to run a 30-minute internal "dojo battle" between 20 members. No sign-up fees, no complex setup — just share the code and compete.

BEST FOR: COLLEGE CLUBS

STUDY GROUPS

TEAM EVENTS

Daily Challenge

One problem. One day. Build an unbreakable streak.

Every day, ArenaX posts a fresh algorithmic problem. Solve it, and your streak counter grows — like a GitHub commit streak or a Duolingo language streak. Your last 90 days of activity are shown as a visual heatmap on your profile. It's a lightweight, low-pressure way to stay sharp every single day.

HOW IT WORKS

1

Open the Daily Tab

A new problem is waiting every day. Varying difficulty — sometimes easy, sometimes a stretch.

2

Solve It Anytime Today

No timer pressure. Solve it in the morning or at midnight — as long as it's before the day resets.

3

Watch Your Streak Grow

Your heatmap and streak counter update. Share it to show consistent daily practice.

EXAMPLE USE CASE

Meera, a career switcher from banking to tech, commits to solving the Daily Challenge every morning before work. After 60 days, her heatmap is nearly full green — concrete proof of discipline she screenshots for her portfolio and LinkedIn.

BEST FOR: CAREER SWITCHERS

CS STUDENTS

FRESHERS

Solo Practice Mode

Warm up at your own pace — zero ELO risk, full learning upside

Not ready to duel? Solo Practice gives you random problems to solve whenever you want, with no ranking consequences. Think of it as the training room before entering the arena — a safe space to try new approaches, experiment, and build confidence before going head-to-head with real opponents.

EXAMPLE USE CASE

Kabir is new to competitive coding and doesn't want to lose ELO while still learning. He spends his first week entirely in Solo Practice, trying 10–15 problems, understanding patterns, and only joining live duels once he feels confident enough.

BEST FOR: BEGINNERS

CAREER SWITCHERS

INTERVIEW PREP

DSA Learning Track

Data Structures & Algorithms — the foundation of coding interviews and competitive programming

ArenaX bundles the best free video content from creators like NeetCode, Striver, and Aditya Verma into structured playlists — then adds practice problems after each lesson. You don't just watch; you apply. Progress is tracked automatically. It's like having a personal tutor map your entire DSA journey.

HOW IT WORKS

1

Pick a Playlist

Choose from curated paths: NeetCode 150, Striver's Sheet, or topic-specific playlists (Trees, Graphs, DP...).

2

Watch & Solve

Each lesson links to the best explanation video. Finish the video, then solve the practice problem.

3

Track Progress

Your roadmap fills up as you complete topics. Completion badges appear on your profile.

EXAMPLE USE CASE

Priya is preparing for campus placements in 4 months. She opens the DSA track and follows Striver's playlist from start to finish — watching videos, solving problems, checking off topics. By week 8, her roadmap is 60% complete and she's solved 80 problems.

BEST FOR: CS STUDENTS

CAREER SWITCHERS

FREE FOR EVERYONE

AI Prompting Track

Learn to talk to AI so well that you get dramatically better results — every time

Knowing how to write a good AI prompt is quickly becoming one of the most valuable workplace skills. This structured course teaches you how to frame questions, give context, iterate on outputs, and use advanced prompting techniques — from basic queries all the way to complex multi-step instructions. Module 1 is completely free.

COURSE STRUCTURE

1

Module 1 (Free)

Foundations — what prompts are, why they matter, and your first hands-on exercises with AI feedback.

2

Modules 2–4 (Pro)

Intermediate & advanced techniques — chain-of-thought prompting, few-shot examples, role prompting, and iterative refinement.

3

AI Feedback

Every exercise is scored by an AI judge that explains *why* your prompt worked or didn't — so you improve faster.

EXAMPLE USE CASE

Neha, a marketing manager at a D2C brand, wants to use AI to write ad copy faster. She completes Module 1 in an afternoon and immediately writes better creative briefs for ChatGPT. She upgrades to Pro to unlock advanced modules and now generates entire campaign drafts in under 20 minutes.

BEST FOR: FINANCE & CONSULTING

PRODUCT MANAGERS

MARKETING TEAMS

NON-TECHNICAL USERS

Agentic AI Track

Go beyond chatting with AI — learn to build systems that work on your behalf

An "AI Agent" is a program that can take a goal and figure out the steps to achieve it — automatically. This track teaches you how these agents are built, how to think about them, and eventually how to engineer them yourself. It's 4 seasons of learning cards (75 total) ranging from beginner mental models to advanced engineering. Season 0 is free.

THE 4 SEASONS

S0

Mental Models (Free)

How to think about AI — foundational concepts explained without jargon. Perfect for any background.

S1

Daily Driver (Pro)

Using AI tools effectively in your daily workflow — productivity, automation, and decision support.

S2

4D Operator (Pro)

Advanced reasoning with AI — getting AI to plan, judge, and chain its own outputs intelligently.

S3

Agentic Engineering (Pro)

Build full agentic stacks — AI systems that autonomously execute multi-step workflows.

EXAMPLE USE CASE

Rahul, a founder running a 5-person startup, takes Season 0 over a weekend and immediately rewires how he thinks about AI delegation. By Season 2, he's built a customer feedback summarisation agent that saves his team 4 hours a week.

BEST FOR: FOUNDERS

PRODUCT MANAGERS

AI ENTHUSIASTS

ENGINEERS

Forge Weekly Challenges

Apply what you learned — submit real work every week, get scored by AI, climb the board

Forge is where learning meets real output. Every week, a new challenge drops across multiple difficulty levels — from foundation exercises to advanced capstone builds. You submit your work (a written answer, a document, code, or a link), and an AI judge scores it automatically against a rubric. Rankings update and ELO changes reflect your performance.

HOW IT WORKS

1

Challenge Opens

A new Forge challenge appears on Monday.

Example prompt:

"Describe how you'd use an AI agent to automate expense reports."

2

Submit Your Work

Upload a PDF, paste markdown, submit code, or link a project — whatever the prompt asks for.

3

AI Scores & Ranks

After the deadline, AI judges all submissions and publishes the weekly leaderboard with ELO changes.

EXAMPLE USE CASE

Divya, an MBA student interested in AI strategy, uses Forge weekly challenges to build a portfolio of structured AI thinking. After 8 weeks, she has 8 scored submissions to show recruiters — concrete evidence of applied AI skill, not just theoretical knowledge.

BEST FOR: ALL TRACKS

AI LEARNERS

PORTFOLIO BUILDING

Tournaments & Hackathons

Bigger events, bigger prizes, public leaderboards

Beyond daily duels, ArenaX hosts scheduled public tournaments and hackathons — competitive events with clear start/end dates, prize pools, and a public leaderboard visible to everyone. Anyone can register and submit. Results are published once the judging period closes. These are ideal for communities, colleges, and companies looking for structured tech competitions.

EXAMPLE USE CASE

A **SaaS company** wants to identify engineering talent in colleges. They partner with ArenaX to host a 48-hour hackathon — students register, submit projects, and the company's recruitment team sees the scored leaderboard directly. Zero infrastructure effort on their side.

BEST FOR: COLLEGE CLUBS

RECRUITERS

CS STUDENTS

COMPANIES

Rank & ELO System

Your skill has a number — and a samurai title to match

Every user starts with an ELO score of 800. Win duels, and your score goes up. Lose, and it drops slightly. The gap between your score and your opponent's determines how many points change hands — beating a stronger opponent earns you more. As your ELO rises, you earn a new samurai tier — each one unlocking a distinct visual badge and a higher place on the global leaderboard.

浪人 Rōnin Unrated	足軽 Ashigaru Bronze	侍 Samurai Silver	大名 Daimyō Gold	將軍 Shōgun Platinum
------------------------	--------------------------	------------------------	----------------------	--------------------------

EXAMPLE USE CASE

Vikram lists "ArenaX Daimyō (Gold Tier) — Top 15%" on his LinkedIn after six months of competing. Recruiters notice it as a verifiable, third-party skill signal — harder to fake than a self-reported "proficient in DSA."

BEST FOR: ALL USERS

PORTFOLIO SIGNAL

GAMIFICATION

Leaderboards

See where you stand — globally, by track, by college, or by country

The global leaderboard shows the top 100 users across all tracks. Filters let you narrow by college or country — perfect for inter-college rivalries or regional comparisons. Each track (DSA, Forge, Prompting) has its own leaderboard, so you can shine in the area you're best at. The top 1% of active players earn the rare "Scout" badge on their profiles.

EXAMPLE USE CASE

The **IIT Bombay coding club** uses the college filter to run an unofficial internal leaderboard — the top-ranked IIT-B student gets a shoutout at their monthly meetup. No admin required; the filter does all the work automatically.

BEST FOR: COMPETITIVE USERS

COLLEGE CLUBS

RECRUITERS

Referral Program

Invite friends, earn real rewards — including OpenAI API credits

Every ArenaX user gets a unique referral code. When someone signs up using your code, gets verified, and becomes an active user, you earn rewards — including OpenAI API keys (useful for building your own AI tools). The more people you bring, the better the rewards. The platform tracks every referral milestone automatically.

EXAMPLE USE CASE

The **president of a 400-member coding society** posts their referral link in the college WhatsApp group. 80 members sign up. They earn OpenAI API credits which they use to build a small internal AI tool for the club — turning a referral perk into a genuine tech resource.

BEST FOR: COLLEGE CLUBS

COMMUNITY LEADERS

BRAND AMBASSADORS

PLANS

Free vs Pro

ArenaX is free to start and generous with its free tier. Pro unlocks the full depth of AI learning.

Free Plan

₹0 forever

- ✓ Unlimited 1v1 Coding Duels
- ✓ AI Prompt Battles
- ✓ Private Rooms with friends
- ✓ Daily Challenge & streak tracking
- ✓ Solo Practice mode
- ✓ Full DSA Learning Track
- ✓ AI Prompting Track — Module 1 only
- ✓ Agentic AI Track — Season 0 only
- ✓ Global Leaderboard access
- ✓ Referral program
- ✓ ELO rank & samurai tiers
- ✗ AI Prompting Modules 2–4
- ✗ Agentic AI Seasons 1–3
- ✗ Pro-only Forge challenges

Pro Plan

RECOMMENDED

Paid subscription

- ✓ **Everything in Free**
- ✓ AI Prompting Track — all 4 modules
- ✓ Agentic AI Track — all 4 seasons (75 cards)
- ✓ Pro-exclusive Forge Weekly Challenges
- ✓ Revise-prompt feature in Prompt Battles
- ✓ Early access to new tracks & features

💡 Pro is ideal for anyone serious about learning AI skills — not just coding.

What's Coming Next

COMING SOON

These features are currently in development and not yet available to users. They represent ArenaX's vision for becoming the most complete competitive skill-building platform.

Live Rated Contests

Timed competitions with a live leaderboard — see your rank update in real time as you and hundreds of others solve the same problems simultaneously.

Backend Track

Build and test APIs and system design solutions. Focused on server-side engineering skills critical for senior developer roles.

Machine Learning Track

Submit ML models scored against real datasets and metrics. For aspiring data scientists and ML engineers.

Frontend Track

Build UI components that are visually compared against a reference. For frontend developers and designers who code.

Cybersecurity Track

CTF (Capture the Flag) style challenges covering ethical hacking, vulnerability finding, and security analysis.
